

The right hidden spots are still **hard to find.**

People want places that match their vibe—quiet to study, cozy to unwind, or local food worth trying. But today's apps make **discovery frustrating.**

THE PROBLEM

Hard to Discover What Fits Your Vibe

Most apps focus on popular places or ads, not hidden gems or niche vibes.

Generic results, not personal

Information is Often Incomplete or Outdated

Photos, hours, menus, or crowd level are missing or not reliable.

Uncertainty before you go

No Simple Way to Save & Organize

Want to save spots for later, but most apps lack personal collections.

Hard to remember, easy to forget

You Can't Contribute Hidden Spots

There's no easy way to add a place you love and share it with others.

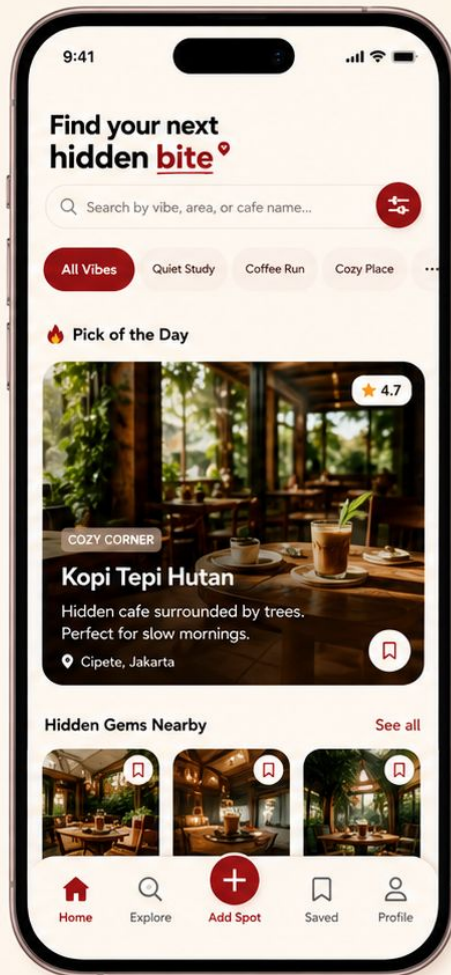

Hidden gems stay hidden

In the end, people **waste time** searching, settle for places that don't feel right, and **miss the spots** that could've been perfect.

Hidden Bites exists to make discovery **personal**, **simple**, and **local.**

THE IMPACT

68%

spend more than 30 minutes searching for the right place.

72%

feel mainstream apps don't show places that match their vibe.

65%

want an easier way to save and organize their favorite spots.

71%

want to contribute places they love and share with others.

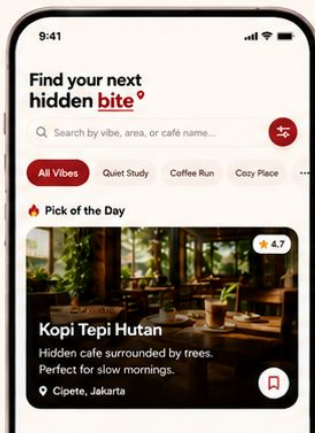

A discovery-first flow for hidden spots.

From exploring curated spots to saving your favorites and sharing new hidden gems with others.

1 Discover

Search by vibe, area, or café name and explore curated hidden spots around you.

Curated picks that match your vibe, every day.

2 Explore

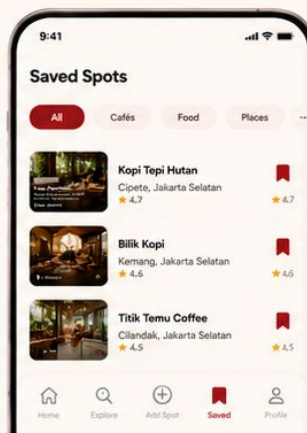

Open a place to see photos, vibe, description, location, and map before you go.

All the info you need, before you decide.

3 Save

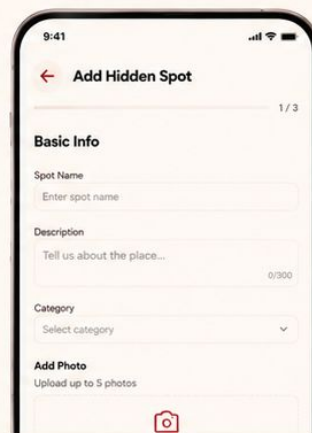

Bookmark the places you love and build your personal shortlist for later.

Your personal list, always one tap away.

4 Contribute

Add new hidden spots with details, photos, and optional location to help others discover.

Share a hidden gem, make it discoverable.

Technical decisions behind the **Hidden Bites** experience.

Built with **mobile-first thinking** to handle real-world constraints, from offline usage to unreliable networks and permissions.

OUR ARCHITECTURE

Flutter UI

Cross-platform
mobile experience

Provider

State management
for a reactive UI

Hive

Local storage for
offline-first data

A lightweight, **local-first** architecture optimized for MVP scale, performance, and offline reliability.

KEY TECHNICAL DECISIONS

Local-First Persistence

01

- ✓ All places, bookmarks, and user-added entries are stored locally with Hive.
- ✓ App remains fully usable without backend dependency.
- ✓ Data persists across restarts and CRUD interactions.

Fast, lightweight,
and demo-ready.

Safe Image Handling

02

- ✓ Supports network URLs, local files, and web blob paths.
- ✓ Prevents crashes from invalid or missing image sources.
- ✓ Graceful placeholders ensure a consistent UI.

Resilient across devices,
environments, and
network conditions.

GPS Fallback & Reliability

03

- ✓ Precise coordinates are treated as optional, not mandatory.
- ✓ Prevents map/directions failures when GPS is unavailable.
- ✓ Add flow remains smooth even without captured location.

Built for real-world
mobile constraints.

Mobile apps live in the real world.

That's why Hidden Bites is designed to be reliable, lightweight, and resilient in everyday mobile conditions.

Reliability first. Experience always.

Every technical decision is made to protect the user experience, even when things go wrong.

Works offline

Data stays safe

Fast & lightweight

User-first design
